

Lamina-Bronze

BROUGHT TO YOU BY

 **Lamina**

Lamina-Bronze has been used in precision mold, die, special machine and a variety of applications for over 50 years. Lamina-Bronze has become a standard in the industry for guide and wear products based on its track record as a proven performer. Because of our standard high quality, Lamina-Bronze products have long been known for their exceptional wearability. All Lamina-Bronze products are manufactured to precise standards to provide reliable performance.

LAMINA-BRONZE PRODUCTS FOR THE METAL WORKING & PLASTICS INDUSTRIES

- Lamina-Bronze uses an Electroplating process to embed a commercial bronze of 80% Cu, 15% Sn, 5% trace elements on a steel base
 - This process provides a base with the strength of steel enhanced with a working wear surface providing the lubricity of bronze
 - This wear surface is abrasion and wear resistant, provides corrosion protection along with lubricity and aesthetic qualities
- Various Lamina-Bronze surface thickness can be provided based on requirements
- Lamina-Bronze bushings can be used with closer tolerance fits for guide post than aluminum bronze self lubricating bushings based on material characteristics providing more precision guidance
- Lamina-Bronze can be used on hard or soft steel and some cast materials
- Lamina-Bronze is embedded on a steel base – it can be held on a magnetic chuck providing ease of machining
